CaFi

CASSIA FISTULA EXTRACT

BECAUSE YOUR
BOWEL LOVES TO BE
TAKEN CARE OF IN A
SAFER WAY!

Low Sennoside content, still better action
Non Habit Forming, Safe for long term use
No Gripping, No Exhaustion
Palatable Sweet Taste, applicable in all formats

CaFi (CASSIA FISTULA) VS CASSIA ANGUSTIFOLIA

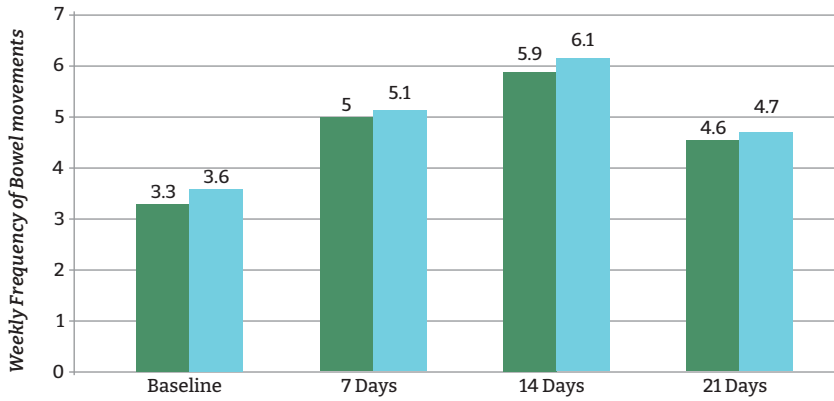

Parameter	CaFi (Cassia Fistula Extract)	Seena (Cassia angustifolia Extract)
Plant Part used	Fruit Pulp	Leaves and Pods
Phytoconstituents	Low Sennosides content High Mucilage content	High Sennosides content No Mucilage content
Extraction	Only Water (Aqueous) 100% Green Solvent extraction	Water +Alcohol used as Solvent
Laxative Action	Comparable	Comparable
Stool Softening action	Comparable	Comparable
Straining on defecation	Lesser	More
Action time	Faster	Slower
Added Benefits	Useful for Skin & Liver Care	Only Laxative action
Long Term Use	Safe	Caution required
Habit Forming nature	No	Yes
Unwanted effects	No unwanted side effects	Abdomen gripping & cramps, Exhaustion after defecation
Safe for Children and Old Age	Yes	Caution
Taste	Sweet and Palatable	Bitter & Non Palatable
Dose compatibility	All dosage formats – Tablets, Capsules, Powder, Liquids, Gummies etc	Challenge in taste

CLINICAL STUDY FINDINGS SUMMARY

CTRI Registration Number: CTRI/2024/08/072838

A Randomized controlled clinical study including over 60 healthy participants having irregular bowel habits showed that the use of CaFi (Cassia Fistula Extract) was as effective as Seena (Cassia angustifolia) in helping to increase the frequency of bowel movements & softening of stool. The study showed that straining in defecation reduced significantly better with CaFi as compared to Seena. The study also showed significantly faster time to act with CaFi as compared to Seena (Cassia angustifolia). Associated symptoms like headache, bloating, gaseous distension were also relieved.

Participants in the CaFi group did not experience as abnormal effects like gripping, pain in abdomen, exhaustion after defecation which were observed in Seena (Cassia angustifolia) group. All laboratory parameters showed non significant changes with the use of CaFi.

CHANGE IN WEEKLY BOWEL MOVEMENTS

Significant increase in the average weekly frequency of bowel movements in both the study groups from baseline to 7 days, 14 days. Higher frequency of Bowel movements with CaFi Tablets Compared to Control

■ CaFi ■ Control Group

CHANGE IN STOOL CONSISTENCY ON BRISTOL SCALE

Significant change in consistency of stool on Bristol Scale in both the study groups from baseline to 7 days, 14 days.

No significant difference between the two groups with regards to consistency of stool (on Bristol scale)

Post stopping study product, stool consistency was maintained showing continuous effect

■ CaFi ■ Control Group

CHANGE IN STRAINING ON DEFECTION

Significant decrease in straining on defecation From baseline to 7 days & 14 days in both the groups

Straining on defecation was significantly lesser in CaFi group as compared to Seena at day 14 and day 21

■ CaFi ■ Control Group

TIME REQUIRED FOR FIRST DEFECTION AFTER PRODUCT CONSUMPTION

Significantly lesser time required in CaFi tablets group as compared to control. Showing faster action.

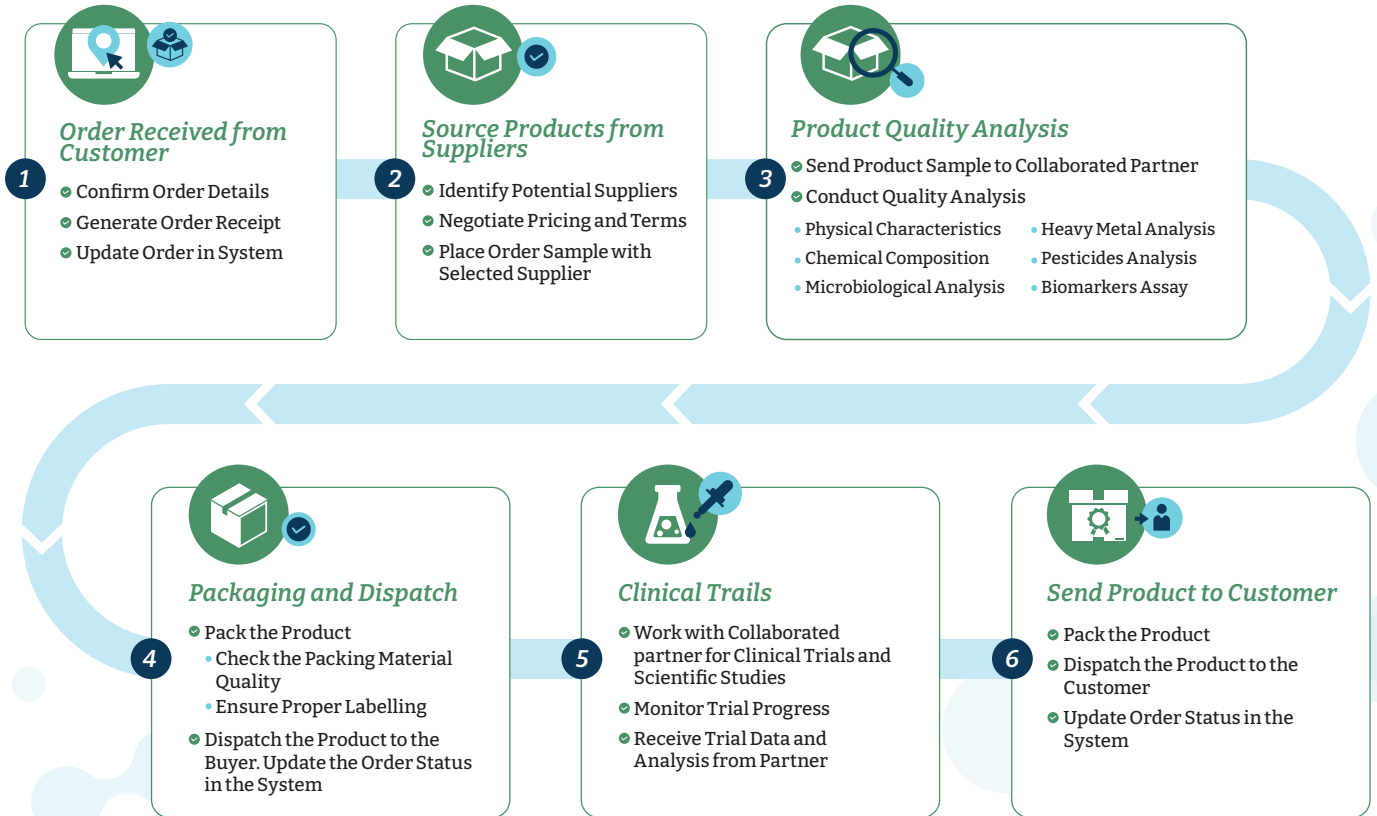

■ CaFi ■ Control Group

YOUR NATURAL INGREDIENTS PARTNER

- Every ingredient at LS sourced to ensure complete traceability & Sustainability through natural sourcing & cultivation.
- Manufacturing & Processing of Extracts at state of art facilities to provide complete assurance of Quality, Safety & Efficacy.
- Backed with Scientific testing through bio-assays and rigorous clinical trials with nothing tested on animals.
- Ware housing with seamless storage & supply chain to offer complete customer satisfaction.
